

SAHIL KAWALE

Aspiring Cybersecurity Professional

📞 8655357757 📧 sahil.kawale911@gmail.com 🔗 <https://linkedin.com/in/sahil-kawale> 📍 Mumbai

SUMMARY

Aspiring cybersecurity professional with hands-on experience in vulnerability assessment, network analysis, and ethical hacking labs. Skilled in Linux, Python, Java, networking fundamentals, and security tools including Kali Linux, Bettercap, and Wireshark. Passionate about application security, threat analysis, and identifying security weaknesses through practical security-focused projects.

EXPERIENCE

Junior Trainee Developer

Techpaathshala

📅 01/2025 - 05/2026 📍 Mumbai, India

- Developed backend applications using Java, Spring Boot, and MySQL.
- Built and tested REST APIs for web applications and backend services.
- Worked with database operations, authentication modules, and server-side logic.
- Gained hands-on exposure to secure coding practices and application development workflows.

PROJECTS

MITM Attack Simulation [MAN IN THE MIDDLE ATTACK]

Conducted practical simulations of Man-in-the-Middle (MITM) attacks to understand attack vectors, interception techniques, and data manipulation in network communications. The work involved using tools to intercept and analyze network traffic, demonstrate vulnerabilities in wireless and wired networks, and explore methods for detecting and preventing such attacks. This experience deepened my knowledge of network security, attack detection mechanisms, and the importance of encryption and authentication protocols in protecting communications. It also enhanced my skills in hands-on ethical hacking and vulnerability assessment relevant to cybersecurity roles.

Shadow-Scanner

Developed a custom port scanning tool named "Shadow Port Scanner" designed to identify open ports and detect potential vulnerabilities on target networks. The tool assists in network reconnaissance by scanning IP address ranges and analyzing active services running on various ports. The project involved implementing scanning techniques to differentiate open, closed, and filtered ports, helping to assess the security posture of systems. This hands-on experience enhanced my understanding of network protocols, security scanning methods, and vulnerability assessment practices important for cybersecurity roles.

SWIGGY BACKEND CLONE APPLICATION

Developed a backend application mimicking Swiggy's core functionalities using Java Spring Boot and MySQL. The project includes designing and implementing RESTful APIs for user management, restaurant listings, order processing, and payment integration. Focused on creating a scalable and efficient backend architecture with secure database interactions and optimized query performance. This project enhanced my skills in backend development, API design, relational database management, and server-side application logic.

EDUCATION

Bachelor of Engineering - BE, Computer Engineering

University of Mumbai

📅 Present 📍 Mumbai, India

FULLSTACK JAVA DEVELOPER

Techpaathshala

📅 01/2026 - 05/2026
